

## Product Overview:

The FR21 Neon is smart counter top scanner designed to read 2D barcodes from mobile phone screens with ease. Ideal for scanning loyalty codes at bars or ticket verification at kiosks, the 'present-to-read' feature gives customers the ability to self-serve where appropriate.

In order to maximise first time reading and increase productivity, the FR21 Neon comes with a white light illumination for optimal focus. Space on the device is provided for your clients to affix their own branding or apply instructions for the user.

## Reasons to buy:

- \* A counter top scanner for reading barcodes from mobile phone screens.
- \* Ideal for loyalty codes at bars or ticket verification.
- \* A present to read feature to give user control.
- \* White light illumination plus optimum focal distance offers easy first time reading.
- \* Space provided for logos to be fixed to the front face.

# FR21 Neon

## 2D Desktop Scanner

### Key Features:

#### Full brand customisation

The FR21 Neon has been designed with the store owner or restaurateur in mind. With branding being so essential for businesses such as these, a 2.8cm window has been positioned on the face of the scanner with a small LED backlight to visually enhance any label or logo that is applied.

#### User friendly

Reading 1D and 2D codes from phone screens, first time every time, the FR21 is an ideal solution for mobile payment, ticket verification and customer loyalty. The FR21 can tilt up to 35° to offer a smooth and reliable present-to-read solution that even a novice can master with ease.

#### Designed for POS

The FR21 has been specifically designed to suit a POS application. Its small footprint and compact shape means it can sit discreetly on any counter top without getting in the way. The white light illumination also means no distracting flashing lights when it is facing out into the store.

#### Ideal for...

Mobile payments - Customer loyalty programs - Group purchase verification - Customer services desk
