

### Product Overview:

The BS10R Sepia from Newland is an incredibly ergonomic and easy-to-use Bluetooth ring scanner. The scanner fits comfortably onto the index finger and can be triggered seamlessly with the thumb, allowing for fast and effective scanning of all 1D and 2D codes. A top of the range Bluetooth adapter allows the device to capture data and relay it back to a terminal up to 30 meters away, making it ideal for large warehouses or retail environments.

If a user does stray too far, the device itself can store up to 50K codes and will automatically sync when back in range, so no data is ever lost. What's more, the BS10R can fit in with your clients' existing operating system with full Windows or iOS compatibility as standard. On a single charge, the BS10R will easily last for an 8 hour shift and its tough outer housing is capable of withstanding accidental drops of up to 1.5 meters; perfect for busy, scan intensive environments.

### Reasons to buy:

- \* Allows two hand working.
- \* Bluetooth connection to data capture device or associated PC up to 30m away.
- \* Fits comfortably onto index finger so easy trigger with thumb.
- \* Compatible with most operating systems including onboard Windows or iOS.
- \* Stores data when out of range (up to 50K barcodes).
- \* Tough housing withstands up to 1.5m drops.
- \* Long life lasts up to a full 8 hour shift.

Head rotates for comfort.

# BS10R Sepia

## 2D Bluetooth Ring Scanner

### Key Features:

#### Hands free scanning

The BS10R is perfectly suited to warehouse and logistics applications where user's hands may otherwise be full with boxes. Sitting neatly on the ring finger, a side position trigger button means that a simple press of the thumb is needed to operate the scanner.

#### Small but durable

Despite its compact size, the BS10R is an incredibly durable device. Its drop tested to 1.5 meters onto concrete and can easily withstand the riggers of daily use in the toughest of environments.

#### Dual device operation

The BS10R can easily be paired via bluetooth to any PC, smartphone or tablet running Windows, Android or iOS. Additionally it can be paired with the Newland MT90 where the use of an arm strap solution means both devices can be used hands free.

#### Rotating head

With the scan head able to rotate up to nearly 360° the BS10R ensures you have full control of the scanning direction, making it easily switchable between right and left handed users.

#### Ideal for...

Warehouse management - Inventory - Logistics
